Hi Mr. Bogue,

I'm Todd DeMelle, an abutter to 42 Mill Street in Westwood. The Conservation Commission is reviewing a new NOI for dam repairs there, and I'm preparing comments.

I came across your August 2016 analysis finding the Mill Brook impoundment had run-of-river characteristics - the technical detail on depth, watershed ratio, and flow-through was really helpful.

I noticed later orders seem to classify it differently. As I prepare my comments, I'm trying to understand what changed - whether it was site conditions, new information, or how the regulation was applied.

Any guidance you can provide would be helpful.

Thanks,

Todd
